

NodeJS: Todo

React – Todo

The following exercise contains the following subjects:

- ◆ Node JS

Instructions

Create a console application in NodeJS for todo list. Create the following functions:

- * Add item
- * Delete item
- * Mark as done
- * Unmark as done
- * List - returns all the items with their status. Done items should be at the bottom of the list.

Save the list in memory - should not be persisted between different runs on the application
